No.: W-HQ/W-4/Track-II/Policy/Circular/28

Date: 04.12.2024

CTE Circular No. 28 / 2024-25

Sub: Measurement of Track Parameters on Yard Lines

* * * * *

1. In station yards, the maintenance of all running lines is important for safe train operation.
 - (i) Railway Board vide Letter No. 2024/CE-II/TK/Track Tolerance, dated 28.10.2024 has issued instructions for upgradation of track maintenance standards of Passenger Loop lines.
 - (ii) Railway Board vide Letter No. 2024/CE-II/TK/Track Tolerance, dated 30.10.2024 has issued instructions for upgradation of track maintenance standards of Goods Loop lines.
2. As such, it is now made mandatory:
"To record the track parameters viz gauge, cross level, versine, twist at every 5th sleeper of the entire yard including track/turnouts on main line/other than main line, turn in curves etc once in 3 months on all routes of WCR."
3. To monitor the track standards, a separate register is to be made for each yard for recording the above parameters and for detailed inspection of all Passenger and Goods Running Lines and turnouts and compliance/action taken on any abnormality if noticed during inspection should be ensured timely and shall be duly recorded in register by sectional JE/SSE.
4. ADENs shall identify the weak locations of their jurisdiction and shall carry out test check @ 10% of all yards covering all the identified weak locations. DEN/Sr.DEN concerned will scrutinize the registers.
5. The measurement record of track parameters with action taken report to be kept ready at all time with SSE/P.Way in-charge and shown to higher officers during their inspection as and when asked.
